Ravi Kumar (SAFe® (POPM), PMP®).

ravi.k.verma.pm@gmail.com (541)-360-9500 LinkedIn

SUMMARY

Deep expertise spanning SaaS, APIs, supply chain, e-commerce, and payments. Known for building platform ecosystems with strong network effects, accelerating product-market fit through customer-centric design, and driving strategic execution that transforms intelligent systems into measurable business outcomes at scale. Scaling AI-powered platforms from zero to enterprise adoption — turning probabilistic ML & GenAI into reliable, workflow-native decision systems that compound through usage, trust, and monetization.

PROFESSIONAL EXPERIENCE

Mersive, Mersive Collaboration Platform **Denver (CO) / NY (Hybrid)**
Senior Product Manager **Nov 2024 - Present**

- Owned end-to-end redesign of Teams/Zoom integration by eliminating legacy plugin dependency & embedding native workflows, reducing user friction & meeting setup time and driving a 21% increase in engagement across 1M+ enterprise user
- Led GenAI roadmap by embedding meeting optimization AI agents into enterprise workflows designing feedback-driven learning loops improving recommendation quality over time increasing weekly active usage by 19% & meeting efficiency metrics.
- Built a cloud-native architecture that unified wireless protocols (AirPlay, Google Cast) with HDMI & DRM, resolving interoperability gaps across fragmented networks & a seamless "one-click" experience driving a 5× lift in session growth.
- Designed modular add-on pricing strategy aligned to usage patterns, enabling customers to expand capabilities incrementally—driving 20% revenue growth and 18% increase in retention through value-based monetization.
- Delivered platform architecture to scale from 5K → 50K+ concurrent API calls (10× growth), achieving 99.9% reliability while enabling enterprise-wide adoption across a Big 4 client's distributed systems.
- Led cross-functional teams to half enterprise launch time from 18 to 10 months by prioritizing roadmap tradeoffs via customer discovery, UAT, accelerating time-to-market for large-scale deployments maintaining reliability across enterprise environments.

Walmart, Order Allocation Platform **Bentonville (AR) / NY (Hybrid)**
Senior Product Manager **Nov 2023 – Oct 2024**

- Built AI-powered order allocation platform translating supply chain complexity into a scalable decisioning system combining optimization model with business rules to drive 15% revenue uplift & improve fulfillment efficiency across 200+ retail locations.
- Defined end-to-end data platform strategy, implementing feedback loops that improved system adaptability and supported 1.5× growth in order allocation volume under increasing scale demands.
- Validated AI allocation workflows with 20+ cross-functional leaders across supply chain and engineering orgs, proactively identifying integration risks and aligning technical strategy with operational constraints—preventing a $2M+ potential failure.
- Launched LLM-powered decision-support system with natural language interface, integrating structured supply chain data via RAG to reduce decision latency by 35%, enabling faster operator workflows and improving fulfillment accuracy by 30%.
- Delivered platform capabilities & led operationalization of ML pipelines via Databricks & SageMaker, transforming ad-hoc models into scalable platform workflows, reducing manual intervention by 33% later adopted across 4 teams, improving system reuse, decision velocity, and operational efficiency across enterprise workflows.
- Architected AWS Lambda-based microservices as reusable platform components, supporting 3× traffic growth while reducing security vulnerabilities by 80% and lowering infrastructure costs by 40% across allocation workflows.

Capital One, Trade Credit Platform **Chicago / NY(Hybrid)**
Product Manager **May 2023 – Oct 2023**

- Launched a promo-finance feature for the Trade Credit platform that increased sales volume by 11% by fixing legacy segmentation gaps through data-driven pricing tiers across 1,000+ retailers/merchants and credit optimization models.
- Delivered Generative AI chatbot using RAG architecture, grounding responses in enterprise knowledge bases with citations to handle 10K+ monthly queries improving answer reliability in regulated environments while reducing hallucination risk.
- Built ML-based anomaly detection engine for AML workflows, prioritizing explainability and auditability to improve detection accuracy by **56%** while ensuring regulatory compliance and investigator trust.
- Led cross-functional alignment with risk, compliance, and engineering teams to operationalize AI solutions within enterprise governance frameworks, meeting 15+ regulatory requirements while enabling scalable deployment.
- Scaled real-time data platform using Kafka and Spark to process 500K+ events/sec with 40% lower latency, enabling faster transaction monitoring and improving responsiveness of downstream fraud detection systems.
- Automated transaction workflows across 8 manual touchpoints, improving operational efficiency by 18% and generating $100K annual savings, while reducing processing risk and increasing system reliability.

Walmart, Order Management Platform **Bentonville (AR) / NY (Hybrid)**
Product Manager **Feb 2022 – Apr 2023**

- Built QMS 2.0, an AI-powered quote management platform with recommendation engine, reducing quote preparation time by 50% and minimizing the rejection rate from 70% to 30% embedding decision intelligence directly into sales workflows.
- Led customer discovery to automate pricing workflows, uncovering pricing friction across 12 workflows translating manual sales friction into a high-scale UX strategy that improvements that reduced manual steps 40%.
- Ran 30+ A/B experiments across critical user journeys, systematically optimizing flows to improve CSAT by 66% and increase conversion rates by 21% by establishing experimentation-driven decision framework
- Re-architected cost decisioning engine into reusable APIs, reducing runtime from 2 minutes to 75 seconds and enabling faster, consistent decision-making across order management flows.

- Redesigned onboarding and activation flows by eliminating integration bottlenecks and simplifying setup, reducing onboarding time from 6 months to 2 months and lowering onboarding costs by 80%.
- Built ML-based regression models for transportation cost forecasting improving accuracy 25%, supporting data-driven supply chain decisions at scale by replacing manual estimations with high-throughput automated intelligence engines.

International Atomic Energy Agency (IAEA) (Pacific Northwest National Laboratory). **Richmond, WA**
Product Owner **Jan 2020 – Dec 2020**

- Conceived & defined the product vision for an autonomous robotic solution addressing the critical need for enhanced nuclear safeguard validation in underground repositories achieving first-movers advantage & aligning technology with innovation
- Led cross-functional team to reduce result processing time by 1200% replacing a manual validation process with a new product
- Orchestrated a cross-functional team of engineers, data scientists, and safety experts, successfully delivering the project 20% ahead of schedule while ensuring adherence to stringent nuclear safety regulations
- Delivered required product specifications under budget by 20% aligned to customer requirements within time constraints
- Developed and executed comprehensive mitigation plans, incorporating advanced AI algorithms for real-time hazard detection and response, which ensured adherence to international nuclear safety standards and reduced non-compliance risk by 95%

Lawrence Livermore National Laboratory (Oregon State University). **Corvallis, OR**
Software Product Developer **Sep 2018 - Dec 2019**

- Conceptualized and developed a cutting-edge Python / PyTorch-based deep learning framework for high-precision scientific nume increasing model accuracy by 25% over existing solutions
- Led a team of data scientists and engineers in the iterative design, development, and optimization of the deep learning model, shortening the computational time by 21% and enhancing the efficiency of scientific data analysis
- Achieved reduction in the computational cost by 50% by incorporating usage of open-source libraries in the solution development
- Utilized advanced analytics to derive insights from user engagement data, driving iterative product enhancements that improved user satisfaction scores by 30% and significantly reduced computational resource requirements
- The team received a monetary appreciation of $40,000 for the timely & quality delivery of the project deliverables

Coal India Limited, Supply chain **Ranchi, India**
Senior Product Manager **Sep 2009 - Dec 2017**

- Responsible for $10M supply-chain transformation, conception, planning & execution, sourcing strategy, and inventory risks.
- Developed a digital platform meant for the implementation of digital transformation & automate the three-supply chain components planning, sourcing & logistics in a B2B set up saving 1.2 million USD as part of a larger ERP implementation
- Decreased operations & inventory costs by 20% & 32% by leveraging the digital platform increasing forecast accuracy
- Increased fill rates by 75%, handled inventory forecasting of 5000+ parts increased forecast accuracy by 20%
- Spearheaded stakeholder engagement initiatives, conducting in-depth requirements analysis with key stakeholders to ensure the precisely met the unique operational challenges leading to a 95% stakeholder satisfaction rate.

EDUCATION

Columbia University, New York, US: Tech-MBA / MS in Technology Management. ***Dec 2021***
Focus: Product Management, Strategy, Accountancy, Finance & Machine learning

Oregon State University, Corvallis, US: MS in Nuclear Engineering ***Dec 2020***
Focus: Scientific computing & Artificial intelligence

Indian Institute of Technology, Dhanbad, India: B-Tech in Mechanical Engineering ***Jun 2009***
Focus: Operations research & Supply chain

SKILLS

Product management skills: Product strategy / vision / roadmap, Product lifecycle management, Agile methodology User story, User acceptance testing, Backlog prioritization, Software development lifecycle (SDLC), Risk management, A/B testing, Hypothesis testing, Work breakdown schedule (WBS), Return of investment (ROI) analysis, Go-To-Market strategy, Requirement gathering, Wireframing
Artificial Intelligence / Cloud skills: Data mining / wrangling / modeling / storytelling / visualization / analysis, Machine Learning, Linear/logistic regression, Support vector machine, Decision trees, Random Forest, Dimensionality reduction, Clustering, Neural networks & Deep learning, Anomaly detection, Lang Chain, Prompt Engineering, AWS Bedrock / Sage maker, Azure AI, ETL, Snowflake, Data Warehouse, Relational database, MySQL
Supply chain / Business analysis / Financial Skills: Supply chain management (planning, sourcing, delivery), logistics & inventory management, Demand forecasting, Capacity management & planning, Six-Sigma, Lean methodology, Just-in-time, Time-series-forecasting & financial modeling
Programming/Tools: Python, R, JSON, REST, PyTorch, TensorFlow, Microsoft Power BI, Tableau, Advanced Excel (VBA), Google Analytics, Adobe Analytics, Jupyter, Azure Databricks, Oracle ERP / NetSuite.
