Ravi Kumar (SAFe® (POPM), PMP®).

(541)-360-9500

ravi.k.verma.pm@gmail.com

LinkedIn

SUMMARY

Results-driven Product Manager with a track record of launching and scaling SaaS and platform products. Expert in AI/ML, Generative AI, APIs, cloud-native apps, and data pipelines. Proven at driving product-led growth through data insights and user-centric design. Strong domain knowledge in supply chain, e-commerce and payments. Known for aligning technology with business goals, mentoring teams, and delivering scalable, high-impact innovation.

PROFESSIONAL EXPERIENCE

Mersive, Mersive Collaboration Platform — **Denver (CO) / NY (Hybrid)**

Senior Product Manager — **Nov 2024 - Present**

- Owned end-to-end delivery of an embedded Mersive-Teams/Zoom experience to bypass a legacy plug-in; improved platform reliability and drove a 21% lift in engagement across enterprise accounts, impacting 1M+ users.
- Led the GenAI agentic roadmap by embedding meeting optimization agents into enterprise workflows, which increased weekly active usage by 19% and established autonomous intelligence as a core platform capability.
- Built scalable, cloud-native casting infrastructure for Airplay/Miracast/Google cast support and analytics dashboard that enabled 5x session growth by resolving ecosystem interoperability hurdles across fragmented enterprise network environments.
- Designed modular add-ons for Pod/Mini/Essentials, increasing revenue 20% and retention 18% by fixing pricing value-misalignment and optimized ARPU strategies through customer discovery and tiered monetization frameworks.
- Delivered a platform architecture supporting a Big 4 client to scale 10X from 5K to 50K+ simultaneous API calls, ensuring enterprise-grade security and 99.9% reliability across global offices through optimized cloud infrastructure and API design.
- Led cross-functional teams to halve enterprise launch time from 18 to 9 months by prioritizing firmware roadmaps via customer discovery, UAT, and strategic trade-offs while maintaining a monthly release cadence.

Walmart, Order Allocation Platform — **Bentonville (AR) / NY (Hybrid)**

Senior Product Manager — **Nov 2023 – Oct 2024**

- Built an AI-powered order allocation platform from discovery to enterprise launch, translating supply chain complexity into decision model that increased revenue 15% by fixing pricing elasticity gap & optimizing promotion across 200+ retail locations.
- Validated AI allocation workflows with 20+ leaders across supply chain and merchandizing, preventing a $2M integration failure by aligning technical strategy with operational constraints before rollout.
- Launched a Generative AI decision-support system leveraging LLM-based natural language interfaces, reducing decision latency by 35% and improving fulfillment accuracy by 30% for 5,000+ high scale enterprise retail users.
- Led operationalization of ML pipelines via Databricks and SageMaker, embedding models into a cloud-native architecture and reducing manual intervention by more than 33% while maintaining high-throughput decision intelligence.
- Analyzed end-to-end data platform strategy spanning ingestion and model serving, building real-time feedback loops that supported enterprise-scale decision intelligence and 1.5X growth in order allocation volume.
- Architected AWS Lambda microservices supporting 3X traffic growth while reducing security vulnerabilities 80% and cutting infrastructure costs 40%.

Capital One, Trade Credit Platform — **Chicago / NY(Hybrid)**

Product Manager — **May 2023 – Oct 2023**

- Launched a promo-finance feature for the Trade Credit platform that increased sales volume by 11% by fixing legacy segmentation gaps through data-driven pricing tiers across 1,000+ retailers/merchants and credit optimization models.
- Delivered a Generative AI chatbot with RAG architecture handling 10K+ monthly support queries, cutting response time 50% and boosting customer satisfaction 40% by resolving hallucinations and data grounding issues.
- Built an ML-based anomaly detection engine for AML workflows, which improved detection accuracy by 56% and reducing false positives 30% by analyzing complex transactional patterns and strengthening the enterprise regulatory compliance posture.
- Led cross-functional alignment with risk and engineering teams to embed AI solutions into enterprise governance frameworks across 15+ compliance requirements, ensuring all models met strict validation and regulatory audit standards.
- Enhanced streaming data pipelines using Kafka and Spark, processing 500K+ events/second with 25% better accuracy and 40% lower latency to support scalable, real-time transaction monitoring.
- Automated transaction processing workflows across 8 manual touchpoints, improving efficiency 18% and generating $100K in annual savings by fixing manual bottlenecks in high-volume trade credit operations.

Walmart, Order Management Platform — **Bentonville (AR) / NY (Hybrid)**

Product Manager — **Feb 2022 – Apr 2023**

- Built QMS 2.0, an AI-powered quote management SaaS platform with recommendation system for 100K users, reducing preparation time by 50% and fixing legacy rejection rates by analyzing friction in workflows.
- Led customer discovery to automate pricing workflows, uncovering pricing friction across 12 workflows translating manual sales friction into a high-scale UX strategy that improvements that reduced manual steps 40%.
- Ran 30+ A/B experiments using statistical analysis to optimize user flows, boosting CSAT 66% and improving enterprise conversion rates 21% in 6 months.
- Built a scalable API-based cost engine that reduced runtime from 2 minutes to 75 seconds, fixing decision velocity bottlenecks to enable real-time pricing scenarios for enterprise-scale operations.
- Accelerated customer onboarding from 6 months to 2 weeks by redesigning activation flows and legacy integration processes, which reduced onboarding costs by 80% and improved platform activation speed.

- Built ML-based regression models for transportation cost forecasting improving accuracy 25%, supporting data-driven supply chain decisions at scale by replacing manual estimations with high-throughput automated intelligence engines.

International Atomic Energy Agency (IAEA) (Pacific Northwest National Laboratory). **Richmond, WA**
Product Owner **Jan 2020 – Dec 2020**

- Conceived & defined the product vision for an autonomous robotic solution addressing the critical need for enhanced nuclear safeguard validation in underground repositories achieving first-movers advantage & aligning technology with innovation
- Led cross-functional team to reduce result processing time by 1200% replacing a manual validation process with a new product
- Orchestrated a cross-functional team of engineers, data scientists, and safety experts, successfully delivering the project 20% ahead of schedule while ensuring adherence to stringent nuclear safety regulations
- Delivered required product specifications under budget by 20% aligned to customer requirements within time constraints
- Developed and executed comprehensive mitigation plans, incorporating advanced AI algorithms for real-time hazard detection and response, which ensured adherence to international nuclear safety standards and reduced non-compliance risk by 95%

Lawrence Livermore National Laboratory (Oregon State University). **Corvallis, OR**
Software Product Developer **Sep 2018 - Dec 2019**

- Conceptualized and developed a cutting-edge Python / PyTorch-based deep learning framework for high-precision scientific nume increasing model accuracy by 25% over existing solutions
- Led a team of data scientists and engineers in the iterative design, development, and optimization of the deep learning model, shortening the computational time by 21% and enhancing the efficiency of scientific data analysis
- Achieved reduction in the computational cost by 50% by incorporating usage of open-source libraries in the solution development
- Utilized advanced analytics to derive insights from user engagement data, driving iterative product enhancements that improved user satisfaction scores by 30% and significantly reduced computational resource requirements
- The team received a monetary appreciation of $40,000 for the timely & quality delivery of the project deliverables

Coal India Limited, Supply chain **Ranchi, India**
Senior Product Manager **Sep 2009 - Dec 2017**

- Responsible for $10M supply-chain transformation, conception, planning & execution, sourcing strategy, and inventory risks.
- Developed a digital platform meant for the implementation of digital transformation & automate the three-supply chain components planning, sourcing & logistics in a B2B set up saving 1.2 million USD as part of a larger ERP implementation
- Decreased operations & inventory costs by 20% & 32% by leveraging the digital platform increasing forecast accuracy
- Increased fill rates by 75%, handled inventory forecasting of 5000+ parts increased forecast accuracy by 20%
- Spearheaded stakeholder engagement initiatives, conducting in-depth requirements analysis with key stakeholders to ensure the precisely met the unique operational challenges leading to a 95% stakeholder satisfaction rate.

EDUCATION

Columbia University, New York, US: Tech-MBA / MS in Technology Management. ***Dec 2021***
Focus: Product Management, Strategy, Accountancy, Finance & Machine learning

Oregon State University, Corvallis, US: MS in Nuclear Engineering ***Dec 2020***
Focus: Scientific computing & Artificial intelligence

Indian Institute of Technology, Dhanbad, India: B-Tech in Mechanical Engineering ***Jun 2009***
Focus: Operations research & Supply chain

SKILLS

Product management skills: Product strategy / vision / roadmap, Product lifecycle management, Agile methodology User story, User acceptance testing, Backlog prioritization, Software development lifecycle (SDLC), Risk management, A/B testing, Hypothesis testing, Work breakdown schedule (WBS), Return of investment (ROI) analysis, Go-To-Market strategy, Requirement gathering, Wireframing
Artificial Intelligence / Cloud skills: Data mining / wrangling / modeling / storytelling / visualization / analysis, Machine Learning, Linear/logistic regression, Support vector machine, Decision trees, Random Forest, Dimensionality reduction, Clustering, Neural networks & Deep learning, Anomaly detection, Lang Chain, Prompt Engineering, AWS Bedrock / Sage maker, Azure AI, ETL, Snowflake, Data Warehouse, Relational database, MySQL
Supply chain / Business analysis / Financial Skills: Supply chain management (planning, sourcing, delivery), logistics & inventory management, Demand forecasting, Capacity management & planning, Six-Sigma, Lean methodology, Just-in-time, Time-series-forecasting & financial modeling
Programming/Tools: Python, R, JSON, REST, PyTorch, TensorFlow, Microsoft Power BI, Tableau, Advanced Excel (VBA), Google Analytics, Adobe Analytics, Jupyter, Azure Databricks, Oracle ERP / NetSuite.
